

Data Analytics for Resource Efficiency

To optimise resources through data analytics to drive efficiencies

Data Strategies and Industry 4.0

Helping your organisation understand and transition towards the factory of the future

Benefits to Customers

- Understanding your data requirements
- Deriving useful information from your data
- Understanding current trends in data analytics
- Analyse potential cost/value opportunities
- Understanding what your suppliers currently offer in data analytics

Typical Solutions and Applications

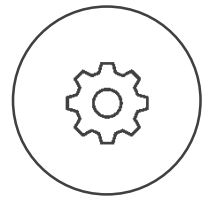

- Strategic data analytics workshops
- State-of-the-art analysis
- Feasibility studies
- Business case and development of implementation plans

Technical Description

Making sense of data through tailored research and analysis. Through technical reports, feasibility and pilot studies, the DARE team can help clients figure out:

- What to do with their current data
- Suppliers' current offering and benchmarking with what's available on the market
- How to unify different data streams
- Understanding IoT, data analytics and machine learning
- Enabling legacy systems to derive more insights
