

## Virtual Engineering

To provide low cost, high functionality and collaborative virtual engineering environment on every engineer's desk

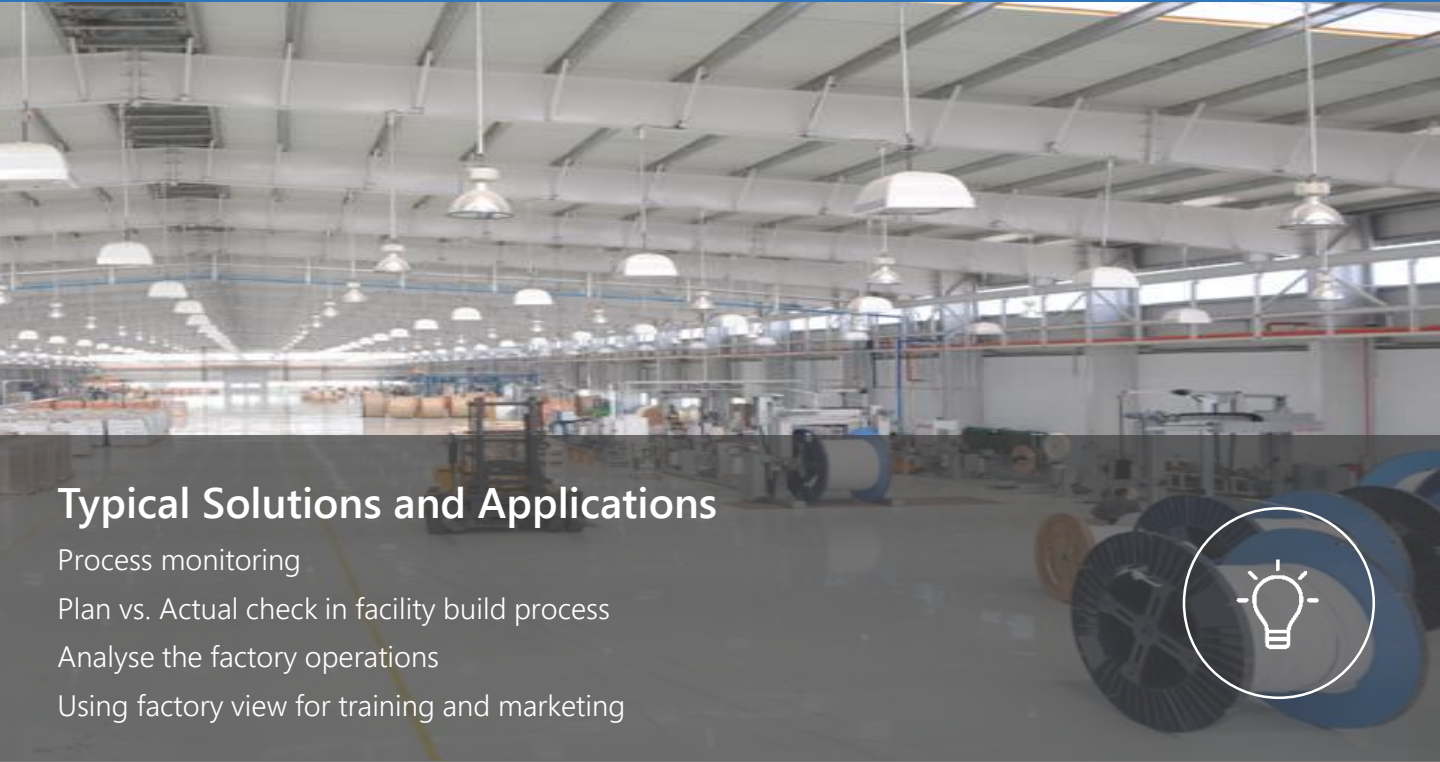

## Factory View

Panoramic view of manufacturing Facilities

## Benefits to Customers

- Comparison between real and virtual world
- Monitor progress of a new build and installation
- Opportunity to present the factory to people not physically present
- Analyse the factory operations
- Using factory view for training and marketing

## Typical Solutions and Applications

- Process monitoring
- Plan vs. Actual check in facility build process
- Analyse the factory operations
- Using factory view for training and marketing

## Technical Description

Typical services include:

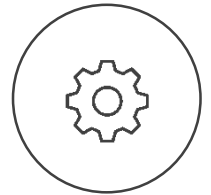

Assessment of the 2D layout of the facility

Optimum route is plotted with a risk assessment and method statement to the customer

The image is captured on site using a 360-degree video scan

Image processing and relationship with the layout is developed

The visualisation is delivered through webhosting or a file on a hard drive as per the customer request
