

Manufacturing New Technologies

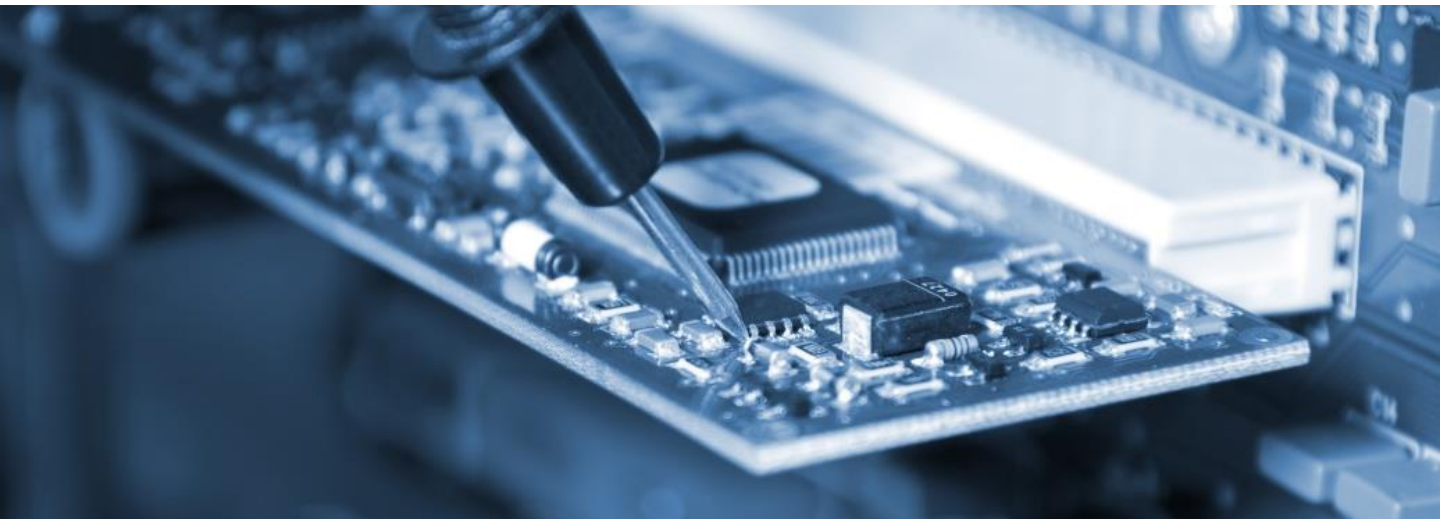

To drive UK manufacturing by developing capabilities, upscaling and process optimisation

Productivity Improvement

Enhance productivity for factory operations

Benefits to Customers

- Identify and eliminate non value added activities
- Identify and remove or reduce the impact of bottlenecks
- Provide greater visibility on the costs associated with operations
- Gain buy-in from team members to support the implementation of a continuous improvement philosophy
- Create a firm foundation for increasing production output

Typical Solutions and Applications

Value Stream Mapping (VSM): Using the VSM tool to identify the barriers in your business processes

Reduce operating costs: Develop an understanding of where business costs can be reduced effectively, by applying our extensive experience and knowledge

Ergonomic Assessments: Assessment of your current work place environment, identifying how it can be optimised towards reducing operator fatigue

Technical Description

Typical services provided include:

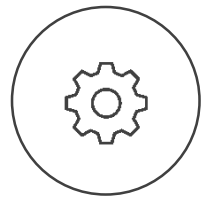

Work with customers to identify processes that would benefit from VSM analysis.

Assessment of processes and generation of an ideal cycle time

High level process map of the operations with waste streams identified

Provide recommendations for waste stream reduction

Design of new process
