

Virtual Engineering

To provide low cost, high functionality and collaborative virtual engineering environment on every engineer's desk

3D PDF

Lightweight, collaborative and open source tool on every engineer's desk

Benefits to Customers

Encourage interaction between partners to effectively and easily share product and process related information

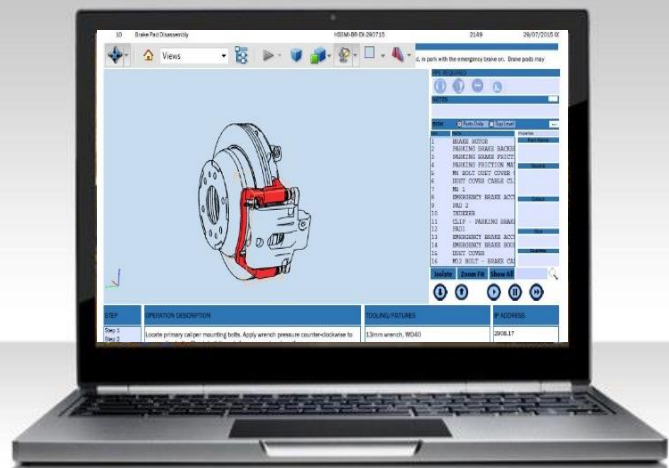

Improve the communication in a rapid and more meaningful manner rather than sending heavy CAD files

Visualise, measure and annotate both dynamic and static process steps

Easy to use (no training required) and excludes costly software

Operator interaction and increased quality for complex processes

Secure and easily shareable lightweight CAD

Typical Solutions and Applications

- Bill of Material (BOM)
- Request for quotation document (RFQ)
- Inspection reports
- Quality Process Sheets (QPS) & Data sheets
- Dynamic Technical drawings
- Operator Work Instructions

Technical Description

- Typical services include:
- Template design
 - PLM integration
 - CAD harvesting (collecting and simplifying CAD data, collecting process and other specified information)
 - 3D PDF development (optimization, annotation, animations, viewpoints)
 - 3D PDF deployment (3D PDF, security layer)
 - Maintenance and support
