

Manufacturing New Technologies

To drive UK manufacturing by developing capabilities, upscaling and process optimisation

Supply Chain Readiness Level Assessment

Help manufacturers ensure their supply chains can scale in accordance with their production plans

Benefits to Customers

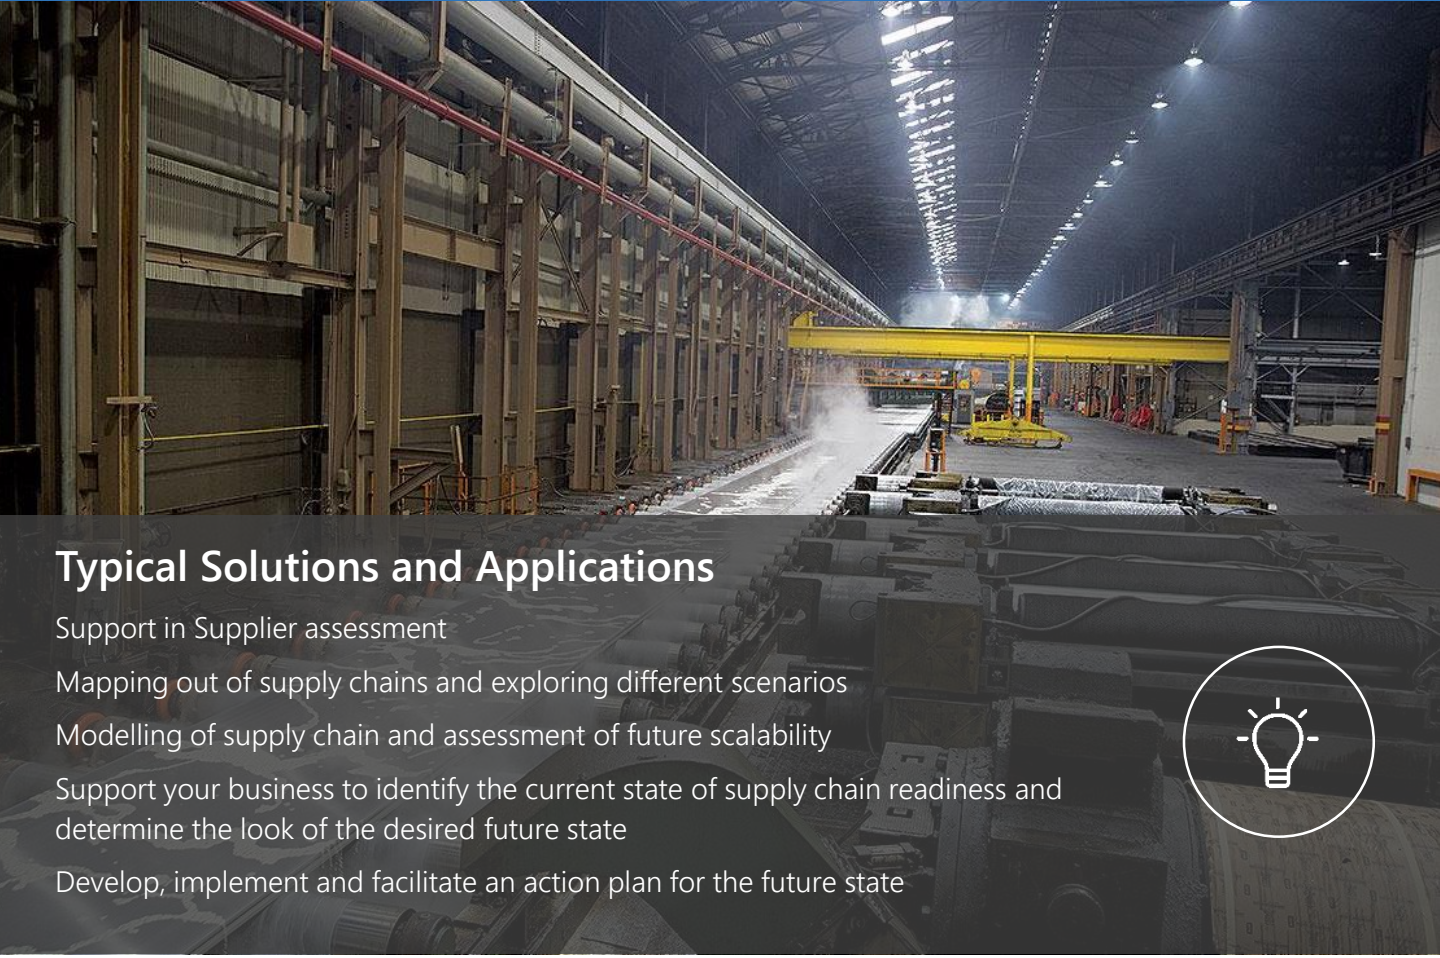

Utilise our Supply Chain Readiness Level (SCRL) tool to determine where your company stands against a standardised scale in line with MRL and TRL levels

Identify actions for advancing your supply chain readiness, determine future operations and assess where you are in terms of realising your goal

Achieve an optimised and streamlined supply chain operation resulting in cost savings

Provide support on upscaling your supply chain process in line with increased production targets

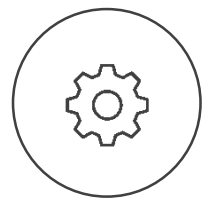

Typical Solutions and Applications

- Support in Supplier assessment
- Mapping out of supply chains and exploring different scenarios
- Modelling of supply chain and assessment of future scalability
- Support your business to identify the current state of supply chain readiness and determine the look of the desired future state
- Develop, implement and facilitate an action plan for the future state

Technical Description

- Typical services provided include:
 - Mapping out the current supply chain operations
 - Conduct a gap analysis to understand the supply chain 'as-is' state and set a vision for the desired 'future' state
 - Develop an action plan for achieving the future state
 - Work with your teams to implement the action plan
