

Virtual Engineering

To provide low cost, high functionality and collaborative virtual engineering environment on every engineer's desk

Machine Health Monitoring

Real time monitoring of machine status

Benefits to Customers

- Online and real time visibility of machine status
- Support maintenance planning and servicing
- Support digital manufacturing concepts such as Industry 4.0 / Smart Factory

Typical Solutions and Applications

Energy monitoring

Process monitoring (Pressure, Temperature, Humidity, Vibration)

Typical application scenario includes installing sensors for monitoring, data aggregation, data transmission, data storage and management

Technical Description

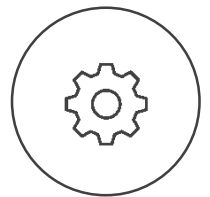

Typical services include:

Assessment of sensor installation

System design for machine health monitoring

Planning of commissioning

Supplier management

Technical Contacts

Satwik Mehta | Manager Virtual Engineering
